                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               An Arabidopsis full-length cDNA library was constructed essential as reported previously (Seki et al. (1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1-B vector (Carninci al. (2001) Genomics 77:79-90) digested with BamHI and SalI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This clone is in a modified pBluescript vector.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       709
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      845

RESULT 1 AAF80144

BP. AAF80144 standard; DNA; 1089

AAF80144;

11-JUN-2001 (first entry)

Nucleotide sequence of a wheat E2F-dimerisation partner (DP) protein.

E2F-dimerisation partner; DP protein; E2F transcription factor; G1 phase; S phase; cell cycle; retinoblastoma protein; alter cell proliferation; 

Triticum monococcum.

WPI; 2001-257972/26. P-PSDB; AAB67762.

New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size.

Claim 13; Fig 1; 77pp; English.

```
protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a hetero-dimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be medulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell, organ or tissue size
encodes a E2F-dimerisation partner (DP) protein. The

The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops. The present sequence represents a cell proliferation-related nucleic acid sequence. The present sequence is published separately from the main body of the specification as EPO data.
                                                                                                                   1020

The present invention describes rice endosperm specific expression sequence labels (expressed sequence tag (BST)) comprising the 48 CDNA sequence, given in SEQ ID NO:1 to 48. The expression sequence labels can be combined in a gene chip using the microarray technique. The expression sequence labels are useful for DNA sequence determination of constitutive rice endosperm CDNA library, removing redundant sequences, and searching interconnection network data bases. The chip can be used for gene cloning, early prediction of hybrid vigour, safety detection of transgenic agricultural product, screening new-type herbicides and

AAF80146-50 represent DNA fragments of a gene encoding a E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell progression. E2F and retinoblastom of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a heterobinder in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be medulated to alter plant cell, organ or tissue shape, and particularly to alter cell proliferation characteristic such as to alter plant cell, organ or tissue size
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Plant; transcription factor; transgenic plant; abiotic stress tolerance; somedic stress tolerance; old tolerance; heat tolerance; low nitrogen tolerance; low phosphate tolerance; fungal disease; glyphosate resistance; flowering; fertility; seed development; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAF80146-50 represent DNA fragments of a gene encoding a E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblactoma protein also interact as a hetero-dimer in cells to suppress certain genes. This repression involves binding of the retinoblactoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly organ or tissue size
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAGTITGAIGAICICCAAAACAICAAGTIACGIAACCAAACACTGGAAAGCTCAGCAGAG 120

The present invention relates to nove! plant transcription factor proteins (I) and nucleotide sequences (II) (Abo61574-Abo63778). The present invention relates to nove! plant transgenic plant be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a altered trait selected from increased tolerance to abicits stress, increased tolerance to conditions, increased tolerance to conditions, increased tolerance to conditions, increased tolerance to classes, increased tolerance to conditions, increased tolerance to disease, including clusphate conditions, increased tolerance to disease, including clusphate conditions, increased tolerance to disease, including clusphate conditions, increased tolerance to disease, increased tolerance to consider to consider tolerance to conditions, increased tolerance to disease, increased tolerance to consider tolerance to considerate, increased sensitivity to ABA, reduced sensitivity to ABA, conceased sensitivity to ABA, tolered determinacy increased tolerance attered disease, increased tolerance to conditions, altered determinacy altered determinacy altered determinacy altered sensitivity altered sensitivity altered sensitivity altered sensitivity altered send tolerance and mass, light green leaves, change in leaf shape, increased leaf fatty acide plants, dark green leaves, change in leaf shape, increased leaf size and mass, light content, altered seed coloration, altered seed side abedieved benefit altered seed coloration, altered seed side and mass, latered seed coloration, altered seed shape, increased leaf fatty acide altered seed coloration, altered seed subcontent, altered seed color
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        316
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TGTTGACCCGGATAAAGATAGGAAGAAGGAGAAGGCTGCGGCACCGGATCACCGGTTG 213
                                                                   New recombinant polynucleotide encoding transcription factor polypeptides, useful for producing transgenic plants with advantageous properties compared to a reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TGCTGGCAAGAAGAAAAAGAGGGGGGTCAACGGGGCTGTTGGACCTGATAAGAGTGGAAG

```
The present invention relates to novel plant transcription factor proteins (I) and nucleotide sequences (II) (MD061534-AD06373PB). The sequences can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a non-transgenic plant or wild-type plant. The transgenic plant comprises an altered trait selected from increased tolerance to abiotic stress, increased tolerance to cond,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant polynuclectide encoding transcription factor polypeptides, useful for producing transgenic plants with advantageous properties compared to a reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                Reuber TL;

fungal disease and particularly Erysiphe, Fusarium and Botrytis, increased tolerance to multiple fungal pathogens, increased resistance to glyphosate, increased sensitivity to ABA, reduced sensitivity to ABA, increased sensitivity to ACC altered sugar sensing, increased tolerance to sugars, altered carbon/nitrogen sensing, early flowering, late flowering, altered flower structure, loss of flowering, reduced fertility, altered shoot meristem development, altered branching pattern, altered stem morphology, altered vascular tissue structure, reduced apical dominance, altered trichome density, altered trichome development, altered avelopment, altered shade avoidance, altered seed development, altered seed development, altered seed germination, slow growth, fast growth, altered cell differentiation, The present invention relates to novel plant transcription factor proteins (I) and nucleotide sequences (II) (ADO61534-ADO63778). The sequences can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a non-transgenic plant or wild-type plant. The transgenic plant comprises an altered trait selected from increased tolerance to abiotic stress, increased tolerance to osmotic stress, increased tolerance to cold, increased germination in cold, increased tolerance to hear, increased germination in heat, increased tolerance to freezing conditions, increased tolerance to low nitrogen conditions, increased tolerance to low phosphate conditions, increased tolerance to

Arabidopsis cDNA encoding partial cell cycle protein CCP16.

```
altered cell proliferation, altered cell expansion, altered phase change, altered senescence, abnormal embryo development, altered programmed cell death, lethality when overexpressed, altered necrosis patterns, increased plant size, increased blomass, large seedlings, dwarfed plants, dark green leaves, change in leaf shape, increased leaf size and mass, light altered seed coloration, altered seed size, altered seed shape, large seed, increased leaf fatty acids, altered seed oil content, altered seed protein content, altered seed protein content, altered seed protein content, increased anthocyanin levels. Note and decreased anthocyanin levels. Note The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
```

The invention relates to a novel cell cycle protein (CCP) and the polymuclectides encoding them. CCP is useful for identifying a compound which modulates the activity of the polympetide and which binds to the polympetide and an anti-CCP antibody is useful for detecting the presence of CCD in a sample. A CCP andilator is useful for modulating the cell cycle or growth of a plant such as Arabidopsis thaliana, rice, wheat, maize, tomato, alfalfa, oilseed rape, soybean, sunflower and canola. CCP uncleic acid and polympetide molecules are useful as medulating agents in regulating cell cycle progression in plants. CCP is useful to treat disorders characterised by insufficient or excessive production of CCP protein forms which have decreased or aberrant activity. Compounds that bind to or modulate the activity of CCP polympetide are useful as herbicides or plant growth regulators. The colympetide are useful for modifying cell fate, plant development, plant morphology, biochemistry and/or physiology, the length of the Gl, colympetide are useful for modifying cell fate, plant development, colympetide are useful for modifying cell fate, plant development, colympetide are useful division, bNA replication, promotion, stimulation or enhancement of cell division, bNA replication, promotion, colympetide are useful and protein involved in the cell cycle due to initiation and/or development, under fruit, leaf formation, dwarfism in plants, sended size, seed development, tuber, fruit, leaf formation, and rock and the anti-CCP antibody are useful in agriculture to modulate the protein lavels or activity of a protein involved in the cell cycle due to convironmental conditions, including abiotic stress such as cold, mutrient compiration, heat, drought, salt stress, or biotic stress such as pathogen attack, to modulate e.g. enhance cells, storage tissues and/or development, endoreduplication in storage cells is useful as an immunogen to convirting CCP substrates. The polyvucle is useful for servensising CCP promition or convirting CC 86 ACTCCAGTGAGGAAATTCATTGTTGATGATGATTCTGAAATTGGATCAGAGAAA 145 screen for naturally is useful for expressing CCP cycle protein; CCP; ss; cell cycle regulation; herbicide; : growth regulator; plant development; abiotic stress; biotic stress; occurring CCP substrates. The polynuclectide is useful for expressing CCI protein, to detect CCP mRNA, or a genetic lesion in a CCP gene and to modulate CCP activity. The present sequence encodes a CCP protein of the New cell cycle protein and nucleic acid molecule encoding it useful fregulating cell cycle progression in plants and for identifying modulators which are useful as herbicides or plant growth regulators. 21; Gaps Length 1114; Sequence 1114 BP; 378 A; 197 C; 243 G; 296 T; 0 U; 0 Other; De Veylder L, Acosta JAT, Magyar Z; Indels plant growth regulator; plant development; abiotic nutrient deprivation; pathogen attack; crop yield Score 153.6; DB 6; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
```

The invention relates to a novel cell cycle protein (CCP) and the polymoclectides encoding them. CCP is useful for identifying a compound which modulates the activity of the polypeptide and which binds to the polypeptide and an anti-CCP antibody is useful for detecting the presence of CCP in a sample. A CCP modulator is useful for modulating the cell of cycle or growth of a plant such as Arabidopsis thalians, rice, wheat, complete acts and cancia. CCP maize, tomato, alfalfa, oilseed rape, soybean, sunflower and cancia. CCP micles acts and cancia. CCP micles acts are production of CCP protein forms which have decreased or regulating cell cycle progression in plants. CCP is useful to treat disorders characterised by insufficient or excessive production of CCP protein forms which have decreased or aberrant activity. Compounds that bind to or modulate the activity of CCP protein forms which have decreased or aberrant activity. Compounds that bind to mandiate the activity of CCP protein forms which have decreased or polymoclectide are useful as herbicides or plant growth regulators. The polymoclectide is useful for modifying cell fate, plant development, of plant morphology, biochemistry and/or physiology, the length of the Gi, cplympeptide are useful as herbicides or plant, promotion, seed set.

S, G2 and/or M phase of the cell givision, DNA replication, shoot and root initiation and/or development, tuber, fruit, leaf formation, shoot and root initiation and/or development, module function, dwarfinm in plants, seed size, seed development, module function, dwarfinm in plants, some the anti-CCP antibody are useful in agriculture to modulate the protein levels or activity of a protein involved in the coll, nutrient deprivation, heat, drought, salt stress, or biotic stress such as cold, mutrient deprivation, heat, drought, salt stress, or biotic stress such as cold development, endoceduplication in storage cells, storage tells, st New cell cycle protein and nucleic acid molecule encoding it useful for regulating cell cycle progression in plants and for identifying modulators which are useful as herbicides or plant growth regulators.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to increasing the cell number of specific cell types, specific tissues or specific organs in a plant comprises modulating the expression and/or the activity in the specific cell types, specific organs of the plant E2F transcription factor. The E2F transcription factor or its homologue, derivative or fargment, is useful for prolonging the pariod of cell division in certain cells and tissues, for increasing the pariod of cell division in certain cells and tissues, for obtaining seedlings with enhancing stress coltaining plants that have increased growth or number of organs, for obtaining plants having more cells in a particular tissue, for obtaining plants having more cells in a particular tissue, for obtaining plants having an increased size of organs or having increased yield, for simulating differentiated cells to re-enter the cell cycle, for overriding the cell differentiation signals, or for altering cell shape. The present sequence represents the dimerisation partner encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          E2F

in a plant, or a part of the plant. The method comprises modifying the expression or activity of an E2F and DP gene or polypeptide. Also described: (1) a transgenic plant cell overspressing an E2F or E2F agene, or an E2F and DP gene or an E2F and DP gene, or an E2F or E2F agene, or an E2F and DP gene or the DP or DP gene is under the control of a tissue or cell-type specific promoter: (2) a transgenic plant, or a part of the plant comprising the cells described above; (3) a progeny of the plant described above; and (4) a plant material obtained from the plant described above; TF method is useful in modilating plant cell cycle proteins by modifying the expression or activity of an E2F and DP gene or polypeptide. The present sequence encodes Arabidopsis thaliana DP, which
                                                                                                                                                                                                                                                  Modulating endoreduplication in a plant, or a part of the plant, comprises modifying the expression or activity of an E2Fa and DPa gene or

The present invention relates to novel plant transcription factor

proteins (1) and nucleotide sequences (11) (ADO61534-ADO63778). The

sequences can be used to produce transgenic plants, which overexpress

(II), where the transgenic plant has an altered trait as compared to a

non-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant comprises

con-transgenic plant or wild-type plant. The transgenic plant conditions, increased tolerance to low introgen conditions, increased tolerance to low introgen conditions, increased tolerance to comprise the plant pathogens, increased tolerance to comprise the plant p

AAFB0146-50 represent DNA fragments of a gene encoding a E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a heterodimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and particularly organ or tissue size
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

/site 1: XhoI;
/site 1: XhoI;
/site 2: XhoI; The labrary was prepared from polyA+ RNA
from pollen at the late vacuolated-vacuolated stage of
development. Pollen was harvested from greenhouse-grown
panicles of sorghum line BTx623. Panicles were removed
from the flag leaf prior to emergence, when no detectable
amylase is present in pollen of male-fertile lines. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EST 08-SEP-2003

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genter, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A. & M University,
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.
